A+W BUSINESS PRO

Integrated Production Control.

A+W Business Pro is a fully integrated solution of the latest generation for small and medium-sized companies. The process from quotation to dispatch has never been easier!

www.a-w.com

Clear, simple, clever

The “Pro” in the name:

A+W Business Pro is a professional and cost-effective entry-level solution for small- and medium-sized companies where order processing and production planning are completely integrated.

Business:

With A+W Business you can handle the entry of quotations, orders, credits, complaints, and delivery notes. You can also manage orders and inquiries and take control of other company areas such as warehouse, purchasing, and dispatch.

Using the integrated statistics module, you can create numerous customer and product-specific queries and evaluations. This helps you manage your product portfolio, as well as your purchasing and sales prices.

The system offers extensive technical support for the processing of quotations and orders. All elements are immediately displayed true to scale and graphically during order entry to prevent errors and speed up the entire process. Price calculation with A+W Business is very flexible and allows division into standard prices and customer-specific terms.

The integration of the A+W Logistics Optimizer expands the ERP system to include complete route planning and control (including a delivery app for the driver) and rounds out the entire package of dispatch and logistics possibilities.

The possibility of incorporating a Web shop – A+W iQuote (G) – offers you the ability to create an additional 24/7 online sales channel and to manage it directly from your central system.

Modules:

A+W iQuote (G)

A+W Logistics Optimizer

A+W CAD Designer (Shapes)

A+W Capacity Planner

A+W CAD Designer (Bars)

A+W Barcode Manager

Your benefits:

- Perfect entry-level solution: fully-integrated commercial and production solution, which thanks to many possible expansions, grows with you
- Easy, quick production processing and release with wizard function
- Low time and cost commitment thanks to intelligent and easy production control (for example production papers and standardized storage organization)
- Secure, correct stock figures thanks to reports from production
- Easy and quick output of production papers and NC code for connected machines
- Easy and adapted functions in the areas of warehouse and breakage management (additional, expanded functions using the A+W Barcode Manager (EL))
- Reduction of direct waste thanks to the latest optimization algorithms and intelligent expansions such as A+W Shape Optimizer
- Reduction of real waste thanks to the efficient handling of residual lites and breakage
- Possibility of incorporating technical drawings (e.g. DXF files, CAD templates for complex glass designs) with an easy and graphically-supported technical order entry

Pro(duction):

Order data is available immediately for production planning. Thanks to the integrated wizard function, the process of batch creation — optimization through to production release — can be completed with a single mouse-click.

The user can switch to expert mode at any time and influence the results directly. The cut optimization per batch and glass type is based on the latest algorithms and delivers superior results thanks to the intelligent variation possibilities for storage space depth, and selection of various stock sizes and residual plates.

With the optional expansion A+W Capacity Planner (EL), you can determine production costs, processing and delivery dates – based on your real machine capacities – and communicate them to customers. This is how you can increase delivery reliability and customer satisfaction.

Thanks to the possibility of incorporating A+W Barcode Manager (EL), the easy yet high-performance scanner solution, you will achieve significant improvements and savings potential in stock and breakage management.

If your company grows, there is an easy upgrade to A+W Production which enables a complete takeover of both the existing and non production-specific transaction data.
