Managing purchasing and sales across several branch offices

A+W Enterprise functionalities

A+W Enterprise is a fully-integrated multi-site-capable ERP system for large- to medium-sized companies in the flat glass finishing industry.

The entire system includes sales management, sales support, purchasing management, warehouse management, and dispatch planning. A+W Enterprise can also be operated as a Web application via the Internet.

A+W Enterprise is divided into three architectural levels: presentation, application logic, and database.

These can be installed and operated on different computers. This increases the scalability and fail-safe nature of the system. The application relies on a relational database and is available for LINUX/UNIX versions. The user front-end can be installed on Microsoft Windows.

With A+W Enterprise, it is possible to manage several sites (databases/branch offices) at the same time. The process steps are automated and handled simultaneously across all integrated system areas (sales, purchasing, warehouse, production, dispatch). Inquiries and orders can be entered into a call center and distributed automatically to individual production locations.

In addition to a series of order interfaces, A+W Enterprise, which is a HTML 5 Web application, also offers the possibility of online entry of quotations and orders. The advantages of the browser-based layout are not just the ability to work on the road and direct system access for external offices and agents. If you are working with the browser solution in-house, you can save time and money thanks to the significantly-reduced work required for installation, updates, and every type of system maintenance.

The system can be customized to the user's individual needs with great ease of use.

Modules:

A+W CAD Designer (Shapes)

A+W CAD Designer (Bars)

A+W Capa View

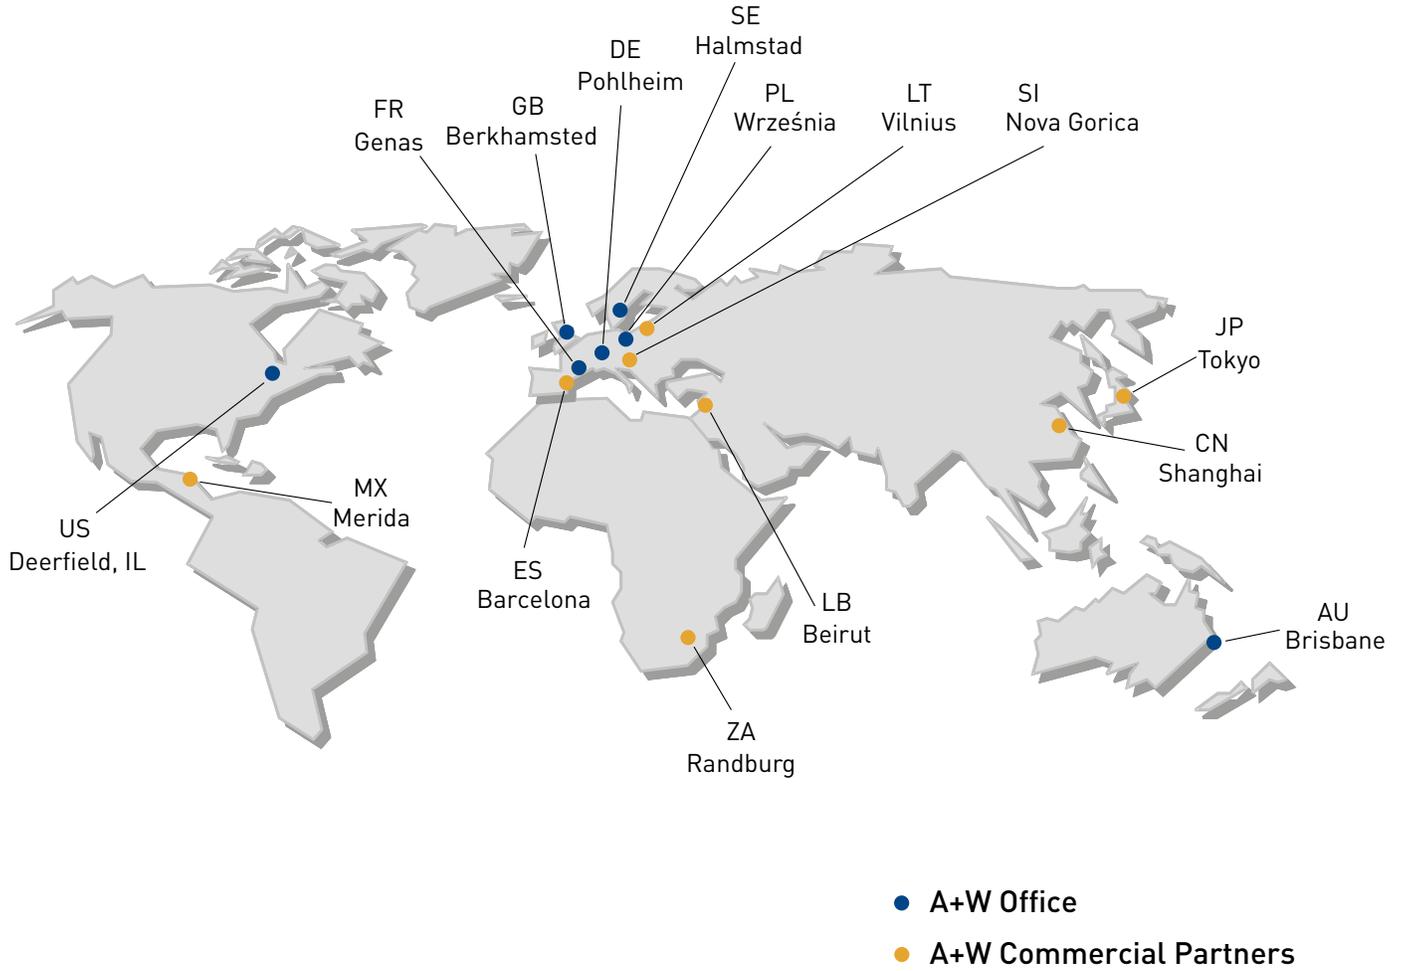

Your benefits:

- Distribution of quotations and orders to different locations thanks to multi-site capability
- Completely automatic handling of group-internal orders between different A+W Enterprise systems
- Mapping of centralized and decentralized company/group networks (branch office structures)
- Reduction of input errors thanks to visual input assistance and automatic adaptation of the BOMs
- Quick process and order handling thanks to automated processes in purchasing, sales, dispatch, and warehouse
- Great system stability and security based on UNIX system and Informix database
- Time and cost savings thanks to fully-integrated technical order entry with automatic comparison of BOMs and incorporation of CAD templates (for example for complex door designs)
- Greater delivery reliability thanks to DIFOT dispatch control (Delivery In Full On Time)
- Greater customer loyalty thanks to more precise date estimates based on real-time information from production (for example, production utilization and production progress)
