Brief bar code reading – long-term effects

Your benefits:

- Determination of the production status of an order
- Tracking a product through production
- Measurement and depiction of productivity, performance and machine statuses (e. g. with A+W Dashboard)
- Machine control based on barcode readings
- Monitoring of production errors (breakage, etc.)
- Quality assurance through batch traceability
- Long-term statistical analyses based on information and status bookings (who, where, when, what)

Do you want to take a leap into the modern world of the WLAN scanner?

With fully-integrated barcode reading by A+W in connection with state-of-the-art Microsoft Windows CE scanners, you can now make bookings immediately and wirelessly. Here, all scans are entered directly into the database and the user receives immediate feedback about whether the data entry was successful.

Always a step ahead!

The readings initiate processing steps and/or are booked as completed, for example, stocks and machine capacities are updated, breakage entered, so that they can be reproduced in a timely manner. This is how you can create a good and broad data basis for evaluations and the estimation of the current situation and future possibilities based on this data.

The following processes are already supported:

- Breakage reports
- Rack bookings (sheet on rack)
- Goods receipt bookings*
- Status/completion reports
- Stock transactions*
- Order and rack information

A+W Smart Terminal – the alternative to the scanner

As an alternative to bookings via scanner, in the A+W Production environment, you can also make completion and breakage reports via an HTML application from any computer or tablet.**
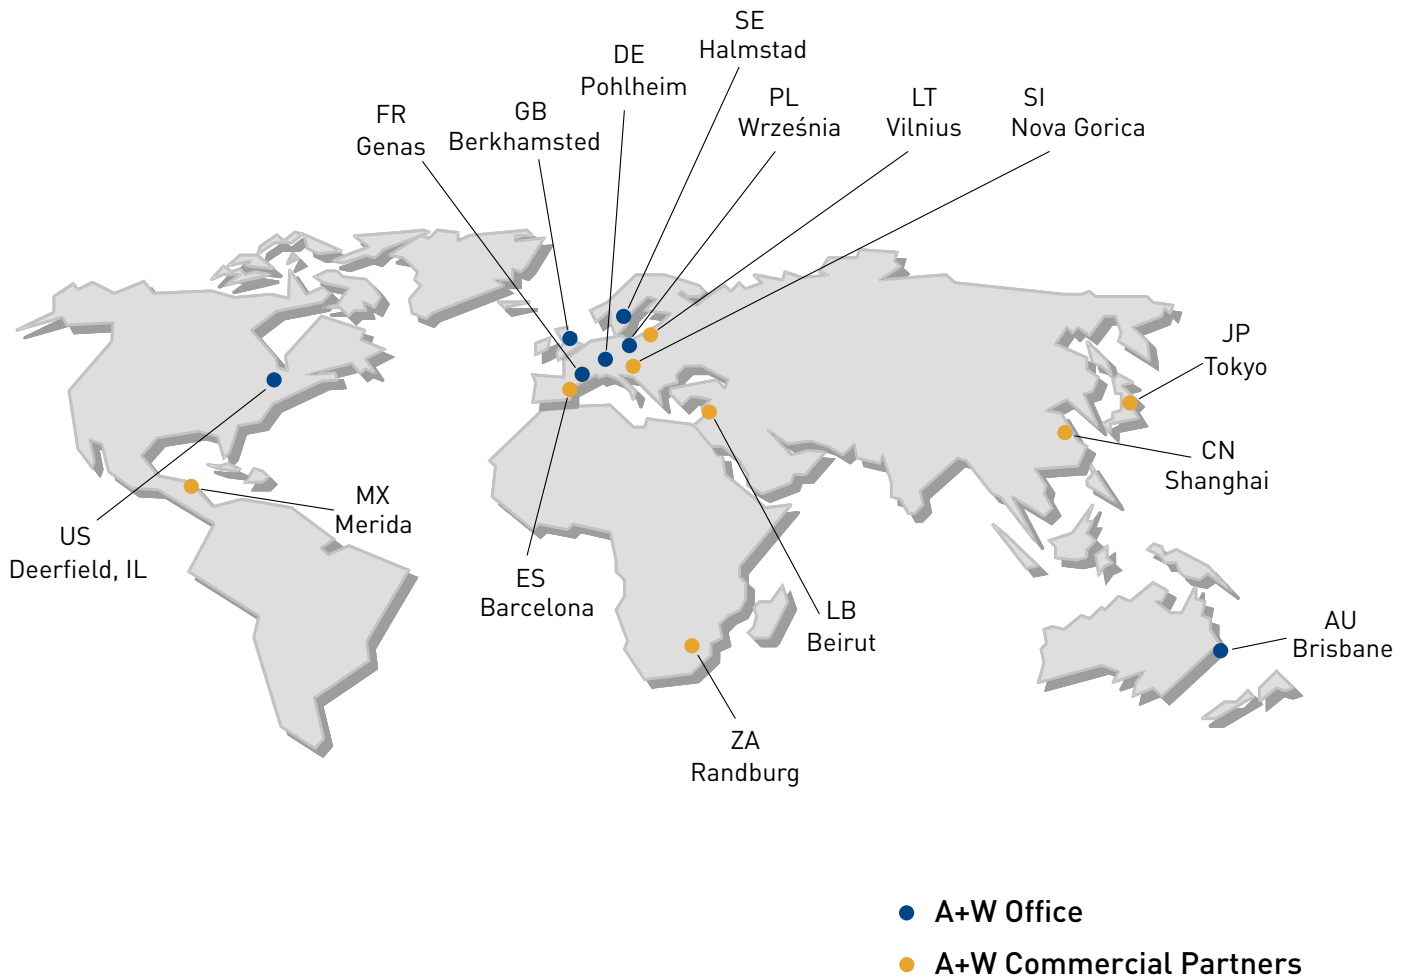

The A+W Barcode Manager comes both as a professional add-on for A+W Production as well as an entry-level solution for A+W Business and/or A+W Business Pro.

* Only available with the A+W Barcode Manager (EL)
** As add-on module/expansion for the A+W Barcode Manager
