

Interactive process control

The flexible A+W Production Terminals support your production process over the long term. These high-performance screen displays serve workers not just as a comprehensive information medium, they also offer the opportunity to intervene interactively in process control.

The user interface of the A+W Production Terminal is extremely flexible and already contains a multitude of predefined views for various departments in your production. In addition, the available elements can be positioned flexibly and existing functions adapted to additional requirements.

In addition to detailed information about the current stock of work, lite structures, furnace assignments, CAD drawings, and the customer's own sketches for the order item in question can also be depicted. Depending on your individual production system,

you can get a complete and high-performance production data collection, whose user-friendly keyboard entries can be supplemented with barcode scanners.

As soon as the user makes an entry, quantity and status information is booked, necessary labels are printed in production sequence, and the CNC code is generated.

Optionally, remakes can be cut directly and stored separately. Each individual A+W Production Terminal is part of the integrated communication network with the opportunity to view and output information directly, send data to other terminals, and provide CNC codes for machines. With this solution, you will increase the process overview in your production and increase productivity thanks to a nearly paperless flow.

Your benefits:

- Visualization of lite structures
- Display of CAD drawings
- Adjustment of the user interface
- Increasing process reliability
- Fewer production papers
- Increased productivity

The A+W Production Terminal is available both as a professional add-on for A+W Production as well as in an entry version for A+W Business Pro.

Both solutions are ideal complements to the A+W Barcode Manager and the A+W Barcode Manager (EL).
